The IT Infrastucture Specialists

Gateway Security Assessment

Enterprise Consulting Group's (ECG) Gateway Security Assessment Service provides a review of a customer's key gateway security infrastructure components and policies.

During this engagement, ECG's highly trained and field experienced Network & Internet Security engineers will perform a review of the customer's network security assets, associated configurations and related policies in the following areas.

- Firewalls
- Switches & Routers
- Wireless Controllers
- Data Encryption
- Malware Protection
- Intrusion Detection / Prevention
- High Availability
- Mobile Access / VPN
- Network Asset Monitoring
- Anti-Virus / Bot Protection
- Incident Response
- System Administration Policies and Practices

This service includes a general analysis of the above listed areas and culminates in a Report of Findings which:

- Describes the current state of the customer's Gateway Security environment.
- Identifies gaps and risks based on "Gateway Security" best practices.
- Provides recommendations for improvement.

As an independent 3rd party assessment, this service is a valuable step toward satisfying internal and external audit requirements related to gateway security. It also provides the customer with the information necessary to solidify their gateway security posture.
